

CAREERBRIDGE

Job and internship portal

Software Requirement Document

1. Introduction

CareerBridge is a job and internship portal aimed at connecting students, job seekers and employers in search of attachments, internships and job opportunities. It provides users with the platform to create profiles, search for job opportunities, and submit applications.

Employers can create company profiles, post available jobs and internship opportunities, review applications and manage applicants. The main goal of careerBridge is to make job and internship hunting easier and faster.

2. Project Objectives

To create a web-based portal that enables student/job seekers to find job and internship opportunities very easily without going through much stress. And for employers to put out job offerings.

3. Users of the system

- Students/Job seekers
- Employers
- Admin

3.1 User Requirements

Students/Job seekers

- Register and log in into the system using their username and password.
- Create and update their profiles.
Upload their CVs and other important documents.
- View jobs and internship details.
- Apply for available opportunities.
- Track the status of their applications.

Employers

- Register and log in into the system using their username and password.
- Create and update their profiles.
- Post jobs and internship opportunities.
- Edit or remove their postings.

- View applications and CVs.
- Update application status.

Admin

- Manage student and employer accounts.
- Manage job and internship postings.
- Approve or reject postings.
- Monitor applications
- Remove inappropriate content.
- View basic system statistics and reports

4. Functional Requirements

- User Registration and Login
- Profile Management
- Search and Filtering
- Application Management
- Application Tracking
- Dashboard
- Admin

5. Technology and System Architecture

CareerBridge is a full stack development web application. It make use of React and Material UI as the frontend, Express and Node.js for backend and API and Microsoft SQL Server for data storage.

6. Basic Workflow

- Registration
- Login
- Profile Creation
- Job/Internship posting
- Search
- Application
- Employer review
- Status Update
- Application Tracking

First, students/job seekers and employers must register and log into their system. Students create their profiles and upload their CVs while employers create company profiles.

Employers then post available job or internship opportunities. Students search for opportunities that match their qualifications and interests and submit applications.

The employer reviews the submitted applications and updates the application status. The students can log into their account to monitor the status of each application.

Non-Functional Requirements

- Security – User accounts and personal information should be protected from unauthorized access
- Usability – The system should have a simple and user-friendly interface.
- Performance – The system should respond to requests within a reasonable time
- Reliability – User, opportunity and application data should be stored accurately and reliably.
- Maintainability - The system should allow additional features to be added in the future.
